## DEPARTMENT OF REGULATORY AND ECONOMIC RESOURCES (RER) BOARD AND CODE ADMINISTRATION DIVISION

## **NOTICE OF ACCEPTANCE (NOA)**

CertainTeed Corporation 20 Moores Road Malvern, PA 19355

#### **SCOPE:**

This NOA is being issued under the applicable rules and regulations governing the use of construction materials. The documentation submitted has been reviewed and accepted by Miami-Dade County RER - Product Control Section to be used in Miami Dade County and other areas where allowed by the Authority Having Jurisdiction (AHJ).

This NOA shall not be valid after the expiration date stated below. The Miami-Dade County Product Control Section (In Miami Dade County) and/or the AHJ (in areas other than Miami Dade County) reserve the right to have this product or material tested for quality assurance purposes. If this product or material fails to perform in the accepted manner, the manufacturer will incur the expense of such testing and the AHJ may immediately revoke, modify, or suspend the use of such product or material within their jurisdiction. RER reserves the right to revoke this acceptance, if it is determined by Miami-Dade County Product Control Section that this product or material fails to meet the requirements of the applicable building code.

This product is approved as described herein, and has been designed to comply with the Florida Building Code including the High Velocity Hurricane Zone of the Florida Building Code.

**DESCRIPTION:** CertainTeed Modified Bitumen System over Lightweight Concrete Decks.

**LABELING:** Each unit shall bear a permanent label with the manufacturer's name or logo, city, state and following statement: "Miami-Dade County Product Control Approved", unless otherwise noted herein.

**RENEWAL** of this NOA shall be considered after a renewal application has been filed and there has been no change in the applicable building code negatively affecting the performance of this product.

**TERMINATION** of this NOA will occur after the expiration date or if there has been a revision or change in the materials, use, and/or manufacture of the product or process. Misuse of this NOA as an endorsement of any product, for sales, advertising or any other purposes shall automatically terminate this NOA. Failure to comply with any section of this NOA shall be cause for termination and removal of NOA.

**ADVERTISEMENT:** The NOA number preceded by the words Miami-Dade County, Florida, and followed by the expiration date may be displayed in advertising literature. If any portion of the NOA is displayed, then it shall be done in its entirety.

Steries

**INSPECTION:** A copy of this entire NOA shall be provided to the user by the manufacturer or its distributors and shall be available for inspection at the job site at the request of the Building Official.

This NOA revises NOA No. 17-1003.03 and consists of pages 1 through 35. The submitted documentation was reviewed by Alex Tigera.

MIAMI-DADE COUNTY

## **APPROVED SURFACING/COATING OPTIONS:**

#### TABLE 4

Chosen components must be applied according to manufacturer's application instructions. Any coating, listed below, used as a surfacing, must be listed within a current NOA.

| System Number | <b>Manufacturer</b>   | <b>Application</b>   |
|---------------|-----------------------|--|
| 1.            | Generic               | Gravel applied at 400 lbs/sq., adhered with flood coat of asphalt at 60 lbs/sq.              |
| 2.            | Generic               | Slag applied at 300 lbs/sq., adhered with flood coat of asphalt at 60 lbs/sq.                |
| 3.            | Karnak Corp.          | Karnak (#97 AF) Fibrated Aluminum Roof Coating applied at an application rate of 1.5 gal/sq. |
| 4.            | CertainTeed Corp.     | FlintCoat A-150 applied at an application rate of 1.5 gal/sq.                                |
| 5.            | Gardner Asphalt Corp. | APOC #212 Fibered Aluminum Roof Coating applied at an application rate of 1.5 gal/sq.        |
| 6.            | Gardner Asphalt Corp. | APOC #400 Sunbrite applied at an application rate of 3 gal./sq.                              |

#### **APPROVED ASSEMBLIES**

**Membrane Type:** APP Modified

**Deck Type 4I:** Lightweight Concrete, Insulated

**Deck Description:** Concrecel Cellular Lightweight Concrete, min 400 psi

System Type A(1): Anchor sheet mechanically fastened, one or more layer of insulation adhered with approved

asphalt.

**Deck:** Min. 2500 psi. structural concrete or plank, followed by Concrecel Bonding agent applied to the

deck at rate 1200 sq. ft/gal using a compressed air sprayer. Rigid insulation panels shall be placed in a minimum ½" slurry-coat of insulating concrete and allowed to the cure overnight. The following day the rigid insulation shall be covered with a minimum 2 ½" topcoat cast of Concrecel. After an additional cure time of 24 hours, Concrecel curing compound was a roller

applied at a rate of 300sq. ft/gal.

#### All General and System limitations apply.

**Anchor Sheet:** One ply or more plies of Glasbase Base Sheet, All Weather/Empire Base Sheet, Flexiglas Base

Sheet, Flintlastic Base 20 or Flintlastic Poly SMS Base Sheet fastened to the deck as described

below:

**Fastening:** Fasten base sheet to deck with OMG CR Assembled Base Sheet Fasteners spaced at 7" o.c. in

the 4" side lap and 7" o.c. in two evenly divided, staggered rows in the center of the sheet.

One or more layers of any of the following insulations:

| Base Insulation Layer  | <u>Insulation Fasteners</u><br>(Table 3) | <u>Fastener</u><br>Density/ft <sup>2</sup>       |

Note: All insulation shall be adhered to the anchor sheet in full mopping of approved hot asphalt within the EVT range and at a rate of 20-40 lbs/100 ft<sup>2</sup>. Please refer to Roofing Application Standard RAS 117 for insulation attachment. Insulation listed as base layer only shall be used only as base layers with a second layer of approved top layer insulation installed as the final membrane substrate. Composite insulation panels may be used as a top layer placed with the polyisocyanurate side facing down.

One or more plies of All Weather/Empire Base Sheet, Glasbase Base Sheet, Flexiglas Base **Base Sheet:** 

> Sheet, Flintlastic Base 20, Flintlastic Poly SMS Base Sheet, Flintlastic Ultra Poly SMS Base Sheet, Flintglas Ply 4 or Flintglas Premium Ply 6 adhered to the insulated substrate in a full mopping of approved asphalt applied within the EVT range and at a rate of 20-40 lbs./sq.

**Plv Sheet:** One or more plies of All Weather/Empire Base Sheet, Glasbase Base Sheet, Flexiglas Base (Optional)

Sheet, Flintlastic Base 20, Flintlastic Poly SMS Base Sheet, Flintlastic Ultra Poly SMS Base Sheet, Flintglas Ply 4 or Flintglas Premium Ply 6 adhered to the base sheet in a full mopping of approved asphalt applied within the EVT range and at a rate of 20-40 lbs./sq. or one ply of Black Diamond Base Sheet or Flintlastic Ultra Glass SA self-adhered or one ply of Flintlastic

STA or Flintlastic APP Base T torch adhered.

**Membrane:** Flintlastic GTA or Flintlastic GTA-FR torch adhered to base or ply sheet.

**Surfacing:** Any of the approved surfacing/coating options listed in Table 4.

(Optional)

**Maximum Design** -52.5 psf (See General Limitation #7)

**Pressure:**

Deck Type 4I: Lightweight Concrete, Insulated

**Deck Description:** Elastizell Cellular Lightweight Concrete, min 350 psi

Anchor sheet mechanically fastened, one or more layer of insulation adhered with approved System Type A(5):

asphalt.

Deck: Min. 22ga., Grade 33, Type B vented steel deck secured at 5 ft. o.c. spans with Tek/5 screws

spaced 6" o.c. Side laps are secured with Tek/1 screws spaced 20" o.c.

This Tested Assembly has been analyzed for allowable deck stress. See Evidence

Submitted Table.

All General and System limitations apply.

LWC Deck: Elastizell with Zell-Fibers (47-50 pcf wet cast density) is applied with an 1/8" slurry coat

followed by min. 1" thick EPS holey board and a min. 2" thick top coat.

One or more plies of Yosemite Venting Base Sheet mechanically attached to the deck using **Anchor Sheet:** 

Trufast FM-90 Base Sheet Fasteners spaced 7" o.c. in the 4" side lap and 7" o.c. in two

evenly divided, staggered rows in the center of the sheet.

One or more layers of any of the following insulations:

**Insulation Fasteners Base Insulation Layer** Fastener (Table 3) Density/ft<sup>2</sup> ACFoam-IV Minimum 1.5" thick N/A N/A

Note: All insulation joints shall be staggered and adhered to the anchor sheet in full mopping of approved hot asphalt within the EVT range and at a rate of 25 lbs/100 ft<sup>2</sup>. Please refer to Roofing Application Standard RAS 117 for insulation attachment. Insulation listed as base layer only shall be used only as base layers with a second layer of approved top layer insulation installed as the final membrane substrate. Composite insulation panels may be used as a top layer placed with the polyisocyanurate side facing down.

**Base Sheet:** One or more plies of Yosemite Venting Base Sheet spot-mopped to the insulated substrate

> with 9-inch diameter spots of ASTM D312, Type IV hot asphalt spaced in an 18 x 18-inch grid or strip-mopped with 9-inch wide ribbons of ASTM D312, Type IV hot asphalt spaced

18-inch o.c.

**Ply Sheet:** One or more plies of All Weather/Empire Base Sheet, Glasbase Base Sheet, Flexiglas Base (Optional)

Sheet, Flintlastic Base 20, Flintlastic Poly SMS Base Sheet, Flintlastic Ultra Poly SMS Base

Sheet, Flintglas Ply 4 or Flintglas Premium Ply 6 adhered to the base sheet in a full mopping

of approved asphalt applied within the EVT range and at a rate of 25 lbs./sq.

APP Modified **Membrane Type:** 

Deck Type 4: Lightweight Concrete, Non-Insulated **Deck Description:** Strong Seal Roof Fill Lightweight System Type E(7): Base sheet mechanically fastened.

Min. 2500 psi. structural concrete or plank or min. 22ga., galvanized, Grade 33, Type B Deck:

0.75% slotted steel deck secured at 5 ft. o.c. spans with 5/8" puddle welds at 6" o.c. Side

laps are secured with Traxx/1 fasteners spaced 20" o.c.

This Tested Assembly has been analyzed for allowable deck stress. See Evidence

Submitted Table.

All General and System limitations apply.

LWC Deck: Steel is coated with concrete bonding agent prior to application of LWC. Strong Seal Roof

Fill (65 pcf wet density for a target 300-350 psi compressive strength) preblended

cementitious lightweight concrete applied to steel deck flutes to a thickness of 1/4" above top flute min.2" thick Apache Holey Board, pressed into the slurry coat. The slurry and EPS are allowed to sit approximately 24 hours prior to application of the topcoat. The EPS insulation is covered with a 3" thick application of the Strong Seal Roof Fill. Roof System installation

commences when the top surface becomes walkable (2-3days).

**Base Sheet:** One ply of Flexiglas Base Sheet, Flintlastic Base 20, Flintlastic Poly SMS Base Sheet or

Yosemite Venting Base Sheet fastened to the deck as described below:

**Fastening:** Fasten base sheet to deck with Trufast FM-90 Base Sheet Fasteners spaced 7" o.c. in a 4" lap

and 10" o.c. in two staggered rows in the field of the sheet.

One or more plies of All Weather/Empire Base Sheet, Glasbase Base Sheet, Flexiglas Base **Ply Sheet:** 

Sheet, Flintlastic Base 20, Flintlastic Poly SMS Base Sheet, Flintlastic Ultra Poly SMS Base (Optional)

Sheet, Flintglas Ply 4 or Flintglas Premium Ply 6 adhered to the base sheet in a full mopping of hot asphalt applied within the EVT range and at a rate of 20-40 lbs./sq. or one ply of Black Diamond Base Sheet or Flintlastic Ultra Glass SA self-adhered or one ply of

Flintlastic STA or Flintlastic APP Base T torch adhered.

One ply of Flintlastic GTA or Flintlastic GTA-FR torch adhered to base or ply sheet. **Membrane:** 

Surfacing: Any of the approved surfacing/coating options listed in Table 4.

NOA No.: 18-1127.17 Expiration Date: 05/22/23 Approval Date: 01/17/19 Page 33 of 35

#### **LIGHTWEIGHT INSULATING CONCRETE SYSTEM LIMITATIONS:**

- If mechanical attachment to the structural deck through the lightweight insulating concrete is proposed, a field
  withdrawal resistance testing shall be performed to determine equivalent or enhanced fastener patterns and density.
  All testing and fastening design shall be in compliance with Testing Application Standard TAS 105 and Roofing
  Application Standard RAS 117, calculations shall be signed and sealed by a Florida Registered Engineer, Architect,
  or Registered Roof Consultant.
- 2. For steel deck application where specific deck construction is not referenced: The deck shall be a minimum 22 gage attached with 5/8" puddle welds with weld washers at every flute with maximum deck spans of 5 ft. o.c.
- 3. For systems where specific lightweight insulating concrete is not referenced, the minimum design mix shall be a minimum of 300 psi.

NOA No.: 18-1127.17 Expiration Date: 05/22/23 Approval Date: 01/17/19

Page 34 of 35

#### **GENERAL LIMITATIONS:**

- 1. Fire classification is not part of this acceptance, refer to a current Approved Roofing Materials Directory for fire ratings of this product.
- 2. Insulation may be installed in multiple layers. The first layer shall be attached in compliance with Product Control Approval guidelines. All other layers shall be adhered in a full mopping of approved asphalt applied within the EVT range and at a rate of 20-40 lbs./sq., or mechanically attached using the fastening pattern of the top layer
- 3. All standard panel sizes are acceptable for mechanical attachment. When applied in approved asphalt, panel size shall be 4' x 4' maximum.
- 4. An overlay and/or recovery board insulation panel is required on all applications over closed cell foam insulations when the base sheet is fully mopped. If no recovery board is used the base sheet shall be applied using spot mopping with approved asphalt, 12" diameter circles, 24" o.c.; or strip mopped 8" ribbons in three rows, one at each side lap and one down the center of the sheet allowing a continuous area of ventilation. Encircling of the strips is not acceptable. A 6" break shall be placed every 12' in each ribbon to allow cross ventilation. Asphalt application of either system shall be at a minimum rate of 12 lbs./sq.

### Note: Spot attached systems shall be limited to a maximum design pressure of -45 psf.

- 5. Fastener spacing for insulation attachment is based on a Minimum Characteristic Force (F') value of 275 lbf., as tested in compliance with Testing Application Standard TAS 105. If the fastener value, as field-tested, are below 275 lbf. insulation attachment shall not be acceptable.
- 6. Fastener spacing for mechanical attachment of anchor/base sheet or membrane attachment is based on a minimum fastener resistance value in conjunction with the maximum design value listed within a specific system. Should the fastener resistance be less than that required, as determined by the Building Official, a revised fastener spacing, prepared, signed and sealed by a Florida registered Professional Engineer, Registered Architect, or Registered Roof Consultant may be submitted. Said revised fastener spacing shall utilize the withdrawal resistance value taken from Testing Application Standards TAS 105 and calculations in compliance with Roofing Application Standard RAS 117.
- 7. Perimeter and corner areas shall comply with the enhanced uplift pressure requirements of these areas. Fastener densities shall be increased for both insulation and base sheet as calculated in compliance with Roofing Application Standard RAS 117. Calculations prepared, signed and sealed by a Florida registered Professional Engineer, Registered Architect, or Registered Roof Consultant (When this limitation is specifically referred within this NOA, General Limitation #9 will not be applicable.)
- 8. All attachment and sizing of perimeter nailers, metal profile, and/or flashing termination designs shall conform to Roofing Application Standard RAS 111 and applicable wind load requirements.
- 9. The maximum designed pressure limitation listed shall be applicable to all roof pressure zones (i.e. field, perimeters, and corners). Neither rational analysis, nor extrapolation shall be permitted for enhanced fastening at enhanced pressure zones (i.e. perimeters, extended corners and corners). (When this limitation is specifically referred within this NOA, General Limitation #7 will not be applicable.)
- 10. All products listed herein shall have a quality assurance audit in accordance with the Florida Building Code and Rule 61G20-3 of the Florida Administrative Code.

## END OF THIS ACCEPTANCE
